Internship Progress Report Y399: Project in Professional Practice

This status report should be completed no less than once every two weeks but can be submitted weekly. It has four parts: a log of your hours worked; the status of your project; a description of your tasks, activities and observations; and your supervisor's acknowledgment.

I. Log of Hours

Student's Name: **Abhimanyu Chaddha** Semester Term / Year: **Summer 2026**
Canvas Section: **1399 (Fall section)**

Maintain a log of all hours applied to the internship.

Date	Total Hours	Primary Work Task
06/15	7.95 hours	We had an advisor try out the agent we made in Teams and had some feedback on bugs and tone of the follow up letter and how we can improve it.
06/16	8.32 hours	We were deciding on making a machine learning model for the follow up letters but ultimately decided to keep the Claude AI APIs due to not enough time and data to make a full trained model. We focused on fixing bugs for the teams bot.
06/17	8.82 hours	We were told to make the AI its own interface away from the Teams Bot, so we started planning on how to do that. We decided to use TypeScript due to its ability to spot errors earlier.
06/18	9.38 hours	We started to focus on making the frontend for the chat bot due to most of the backend being done.
06/19	0	Juneteenth holiday
06/22	8.45 hours	We were still focusing on polishing the frontend for the chat bot. We also focused on removing Microsoft teams bot code so it would look cleaner.
06/23	8.26 hours	We finished making the frontend of the chat bot and focused on getting feedback from the supervisor regarding additional features for the frontend. We focused on connecting this with the backend.
06/24	8.78 hours	We worked on connecting the frontend with the backend and testing out common bugs regarding saving user conversation history, salesforce task extraction, and how to make the experience smoother.
06/25	8.38 hours	We finished deploying the app through Azure and focused on common edge cases in the code to watch

AT

		out for and added a feedback button so when people try it out, we can find responses for the bot and how to improve it.
06/26	5.13	ISC Corporate Event on Indianapolis Motor Speedway

Total: 73.49 hours Internship Accumulated Hours: 153.49 hours

II. Project Status Report

Review the project plan (work breakdown structure) and include here the work tasks from the date range of this report that matches the dates on your project plan. Then, include a project status for each of those work tasks, whether the task is complete or incomplete, and indicate whether you are behind, on or ahead of schedule.

<i>Work Task</i>	<i>Completion status</i>	<i>behind schedule</i>	<i>on schedule</i>	<i>ahead of schedule</i>
(example) Review Project Proposal	Complete			X
	Incomplete			
(example) Complete the Project Plan	Complete			
	Incomplete		X	
Microsoft Graph API Integration	Complete			X
	Incomplete			
PII detection using Azure AI	Complete			X
	Incomplete			
Claude AI for letter generation and Azure OpenAI for conversation	Complete			X
	Incomplete			
Salesforce integration for action item extraction from follow up letters for advisors	Complete			X
	Incomplete			
Frontend Full stack UI from the initial teams bot	Complete			X
	Incomplete			
Connecting the backend and the frontend	Complete			X
	Incomplete			
Deployment and documenting testing	Complete			
	Incomplete		X	

III. Log of Tasks, Activities and Observations

Provide a summary of tasks, activities, and observations for the period of this report. This should be a narrative of the work tasks listed in part II of this report. Include any responsibilities or duties you may have had and what you learned each day, etc. For work toward the project goal, please provide **adequate technical details**. *Submit **evidence** of your work in the form of screen captures as appropriate.*

We focused on integrating and finishing up the Microsoft Graph API, which is used to recover the transcripts after each meeting that the advisor takes. Additionally, we evolved from the initial Microsoft Teams Bot to making the AI chatbot its own interface, which essentially meant creating a full stack application that we can use internally for the advisors. Majority of the time we spent trying to connect the frontend and the backend and getting rid of all the old teams code. Additionally, we focused on testing locally within the team to watch for edge cases such as conversating history, uploading multiple files in the chat, speed and caching regarding the application, and optimizing efficiency. We were also able to deploy the application on Microsoft Azure where we enabled GitHub Actions to support continuous integration and continuous deployment lifecycles.

IV. Supervisor acknowledgement

To the supervisor: upon completion of the required hours, please meet with the student to a) review this report, b) evaluate the student's performance, and c) acknowledge the work described above by signing below, and by initialing each page of the report.

Please return this report to the student for professional development, and for submitting to their internship instructor. **Thank you.**

(Optional): Write any additional comments or feedback to the student in the space provided. Please note these comments will be seen by the student's internship instructor.

ABHI CONTINUES TO EXCEL - ALWAYS
ITERATING AND PROACTIVELY PLANNING
FOR EDGE CASES. EXCELLENT AT
TAKING FEEDBACK.

ANDREW TELLITOCCHI
Name of Supervisor (please print)
